

# Spotify SoundMapper

Liven up your morning commute  
with the sounds of your city.

## Curate the vibes for your journey in 3 easy steps:

### 1. Enter your origin and destination point.

*Overpass API* provides access to the mapping geodata. *Discogs' API* then delivers a list of musicians hailing from the cities along the submitted route

### 2. Choose what type of music you're feeling

Users can filter their results by tempo, loudness, energy, or danceability to curate that perfect playlist.

### 3. Sit back and listen to the sounds of the city.

*Spotify's API* generates a playlist based on the selected route, filters, and musician metadata.
